Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Above prior art references were discussed. Applicant argues that Cannon et al. does not have poles intersecting with pole crossings and the tension harness (10) is not connected to the pole crossings as claimed. Examiner pointed that applicant did not positively claim the poles being connected by the pole crossings and the tension harness connected to either crossings or poles. Cannon et al. are used as a reference to teach the tension harness (10) to diagonally connect a non-adjacent pair of vertices and not necessary to connect the crossings and poles since the claim does not directly claimed. To overcome the combined references, Applicant needs to positively claim the connection between the poles, crossings, vertices of openings and the tension harness.
